Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 13 June 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 32, 34, 35, and 37 have been considered but are moot in view of the new ground(s) of rejection.

Specification

2. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

3. The disclosure is objected to because of the following informalities: in page 2 line 14 delete typo "(layer 4)" and insert ---(layer 3)---.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Art Unit: 2666

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

5. Claims 32, 34, 35, and 37 are rejected under 35 U.S.C. 102(e) as being anticipated by Han (6,009,097).

Regarding claim 32:

Han discloses the network comprising: customer premises equipment (see the network and customer equipment shown in Fig. 1 and recited in the abstract); a fast packet switch coupled to the customer premises equipment (see the ATM switch and router in Figs. 1 and 4) with at least one permanent virtual circuit (see col. 4 lines 53-61 which recite the cut-through paths being Permanent Virtual Paths) and receiving a plurality of frame

Art Unit: 2666

relay data packets, the fast packet switch including address translation circuitry for translating user data within at least one of the frame relay data packets into a fast packet address (see col. 5 lines 3-10 which recite translating IP addresses into ATM addresses); wherein the translation circuitry is responsive to a plurality of different service categories and configured to determine a quality of service responsive to layer 4 data (see col. 2 lines 31-53 which recite routing traffic to destination having similar quality of service, col. 3 lines 42-49 which recite packets being handled using IP network layer 3 packet forwarding clearly anticipate the service being responsive to layer 4 data, and col. 6 line 44 to col. 7 line 17 which recite the router performing layer 3 routing function using destination addresses, each assigned to a QOS).

Regarding claim 34:

Han discloses wherein the translation circuitry is responsive to Internet protocol (IP) data within the frame relay data packets (col. 2 lines 31-53 and col. 6 line 44 to col. 7 line 17).

Regarding claim 35:

Han discloses wherein the translation circuitry is responsive to layer 3 Internet protocol (IP) data (col. 3 lines 5-14).

Art Unit: 2666

Regarding claim 37:

Han discloses wherein the fast packet switch is an asynchronous transfer mode protocol based switch (col. 6 line 44 to col. 7 line 17).

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Aida discloses a method and device for multi-class ATM connection admission control.
